320 employees
(headquarters and industrial site)
- > Vallée de la Chimie:
240 employees
(industrial site)
- > 2017 turnover:
900 million euros

ACTIVITIES

KEM ONE is Europe's 2nd largest PVC manufacturer. It handles all the stages that, starting from salt, lead to the manufacture of PVC. As such, it also produces caustic soda and chlorinated derivatives.

KEM ONE uses salt to produce chlorine, caustic soda, hydrogen, hydrochloric acid and bleach. This chlorine is used for the production of vinyl chloride monomer (PVC raw material) and chloromethanes. KEM ONE offers four types of resins: PVC mass and suspension, emulsion PVC and C-PVC, marketed to industrial plasturgists.

Its products are used in many everyday applications, such as construction, automotive, health, leisure, and water treatment.

KEM ONE IN LYON VALLÉE DE LA CHIMIE

- > **KEM ONE Saint-Fons:** 240-employee industrial site.
 - > PVC and C-PVC production with bulk, big-bag and bag packaging.
 - > Hydrochloric acid and bleach production.
 - > R&D: plastic applications laboratory.
