- > 13,000 people working in research including 6,000 researchers
- > Turnover: 70 billion euros
- > Trading surplus: 8.6 billion euros

## ACTIVITIES

The UIC is a professional organization bringing together and supporting the chemical industry in France. The Union des Industries Chimiques works to improve the competitiveness and development of the chemical industry and its applications at regional, national and European levels. It is the spokesperson of the chemical sector to national, European, and international public authorities. It defines common positions and actions, and identifies the broad lines of a proactive and responsible industrial policy.

The UIC is made up of about thirty experts combining their know-how in order to provide adequate responses to the challenges facing chemical manufacturing companies (on technical, economic, fiscal, commercial, legal, social, and image-related subjects etc.) and to create favorable conditions to the development of sustainable chemistry in France.
